SECTION C: SPECIFICATION/WORK STATEMENT

C.1 SCOPE

C.1.1 The Government of the District of Columbia, Office of Contracting and Procurement, on behalf of the Department of Motor Vehicle (DMV) is seeking a contractor with expertise in inspection station customer service to provide inspection station support, audit services, preventive maintenance and quality control consulting services.

C.1.2 The vehicle inspection program has been in the process of being upgraded to improve customer service and operations. The contractor shall work with DMV and vendor staff to assist in synchronization of vehicle inspection with registration, develop specifications for specific reports which are required to be provided to EPA, research and present options for an upgraded security system and assist DMV in developing specifications for a new system, research and present options for installation of cameras. The period of performance shall be one (1) year from date of award.

C.2 DEFINITION

C.2.1 DMV has been the subject of several assessments and process improvement projects over the last few years to meet US EPA requirements. When the problem was identified we obtained EPA permission to implement a new system in phases. The final phase should be done this fiscal year.

C.2.2 The vision is to create a fully auditable and creditable safety and emissions inspection system that meets or exceeds EPA requirements. In addition, there are changes which have taken place in the last two years to meet US EPA requirements. Additional program changes are required both to improve customer service and to meet regulatory requirements.

C.3 REQUIREMENTS

C.3.1 The contractor shall work with DMV and vendor staff to assist in synchronization of vehicle inspection with registration.

C.3.2 The Vehicle Inspection Management System (VIMS) contains the data from vehicle emissions and safety inspections. There are specific reports which are required to be provided to EPA of the emissions testing data. Specifications for these reports shall be developed, and then coordinated with VIMS contractor to integrate and test these reporting functions.

C.3.3 The contractor shall research and present options for an upgraded system and assist DMV in developing specifications for a new system. The

contractor shall help assist DMV to get the new system installed.

- C.3.4** The contractor shall research and present options for installation of cameras at the South West inspection station which show the queue and are broadcast via the web so the public can assess the current wait time. The contractor shall assist DMV in selection and installation of such a system.
- C.3.5** The contractor shall spend three days a month working in the test lanes to improve customer service. This shall include streamlining the test process, working with station management to provide training on vehicle emissions testing technology, improving signage at the station, improving the layout of the equipment in the test lanes to speed testing and reduce wait time. Performance measurements shall be compiled before and after to validate the degree to which service was improved by the changes recommended by the contractor.
- C.3.6** The contractor shall work with the equipment and VIMS vendors to transfer the printing of fees from a separate report onto the vehicle inspection report (VIR).
- C.3.7** The contractor shall obtain assistance to remove the current unused dynamometers in lanes 1 through 5 and cover the pits to prevent employees from having accidents on the dynamometers not in use and to reduce the need for service to the dynamometer pits. This could include filling the pits, or removing the components which extend above the floor, and then placing cover plates over the open areas. If the pits are covered as opposed to filled, then they will still require maintenance to remove water which would accumulate in the pits.
- C.3.8** The contractor shall work with the equipment vendor to add printing of the VIR on blank paper with the system printing the DC and DMV logos.
- C.3.9** The contractor shall work with DMV IT staff to transfer of the connection between the lane test systems and VIMS to be via commercial communication lines (DSL) with automatic failover.
- C.3.10** The contractor will work with the equipment and VIMS to ensure the vehicle type is downloaded from Destiny to lanes at the beginning of tests.
- C.3.11** The contractor shall assist DMV in developing public relations videos to be played in the test facility while customers wait to let them better understand the test process, the importance of testing and what to expect as part of the process including the time constraints on free retests, etc.

Inspection Station Support

- C.3.12** The contractor shall work with the equipment vendor to re-integrate printing of brake test results diagrams to print on the same printer as the VIR.
- C.3.13** The contractor shall work with the equipment and VIMS vendors to add transfer of quality assurance data (audits and calibrations) to the VIMS which is not currently uploaded but is required by EPA.
- C.3.14** The contractor shall Investigate changing inspector log in to the test systems to a more secure system to prevent fraud. The new system should require log in at each position in the lane before each portion of the test is conducted. Log in methods to be considered include biometrics (finger print readers), use of current RFID-based id-badges, etc. The system should show a picture of the employee conducting the test in the corner of the screen while the inspector is performing the test.
- C.3.15** The contractor shall work with outside equipment development companies to test self OBDII inspection equipment such as kiosks that could be located around the District on District property.
- C.3.16** The contractor shall assist DMV in contracting with companies which can assist with the implementation of specific test station improvements. This shall include developing specifications for need changes, development of requests for proposals and assistance with evaluation of proposals.
- C.3.17** The contractor shall implement various lane testing process and equipment layout improvements. These would include removing old dynamometer control racks and power lines from the switch panel, old vehicle cooling fans, temporary gas, communications and power lines, relocating equipment to more efficient positions in the test lanes (once the old dynamometer controller racks are removed and the dynamometer pits are covered), relocate the IM240 CVS blowers to the roof of the building, remove unused network and equipment lines, ensure all power lines and outlets are properly covered.
- C.3.18** The contractor will investigate the need for hydrogen and toxic gas alarms in the gas storage room.
- C.3.19** The contractor shall work with equipment vendor to add automated propane injection systems to three IM240 lanes. This will reduce the amount maintenance personnel need to calibrate or adjust the IM240 systems. (The propane injection is required to be performed once a day, normally at the start of the day).
