ATTACHMENT B:

1. MINIMUM NEED

DC-NET has 20 transport nodes that were installed over 5 years ago. These sites were equipped with C & D AGM-60 rectifiers and Liberty batteries of either 100 ampere-hour or 150 ampere-hour capacity. Operational battery end-of-life for these batteries has been reached with one string already showing abnormal readings at the last preventative maintenance interval; industry practice for this generic type of battery is to replace them after 5 years to insure adequate operational reserve. The AGM-60 rectifiers have been manufacturer discontinued for some time; they are also a very hazardous to work on when adding or changing any power output termination(s) while in-service. This is a routine requirement as the equipment at a given site needs to be replaced, upgraded, or additional equipment is deployed. Additionally, the replacement of the AGM-60's with the requested Valere equipment will enable the elimination of the legacy Dantel alarm telemetry equipment, which has been proving un-reliable and un-dependable. The Valere BC2000 controller is Ethernet based and has the provision to accept up to 4 out-side alarm contacts in addition to its own environmental telemetry and system performance data delivery (functions not accessible on any level from the AGM-60/Dantel platforms).

2. ANTICIPATED DELIVERY REQUIREMENTS

The desired delivery date is TBD.
